

Microbiome features in source-defined Rb1 converter groups

a Sample linkage and sequencing QC

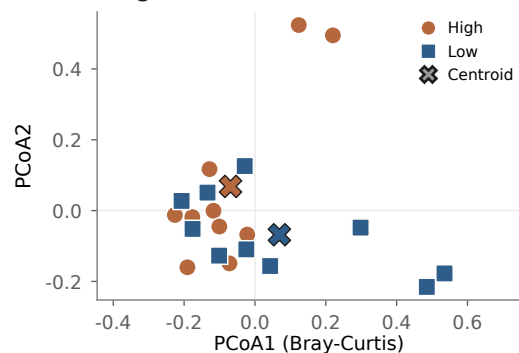

Public-data reprocessing of source-defined converter labels — not an enzyme assay.

b Observed richness by converter group

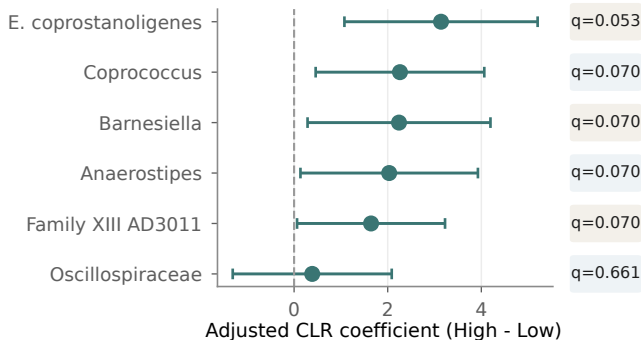

Median 284 vs 224
Wilcoxon $P=0.045$ · Adj. $P=0.012$; $q=0.0279$

c Bray-Curtis ordination (High/Low n=10)

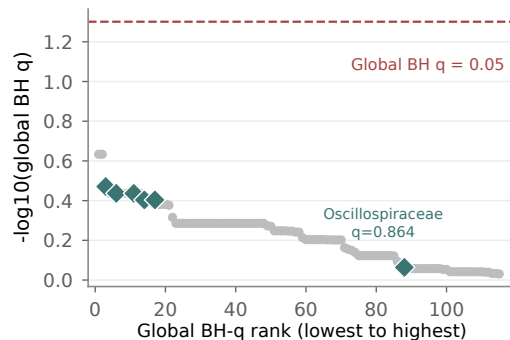

PERMANOVA $R^2=0.066$; $P=0.131$
ANOSIM $R=0.058$; $P=0.160$ · PERMDISP $P=0.092$

d Candidate taxonomic associations

Candidate-set BH; 0/6 passed.
Taxonomic association only.

e Global multiplicity across 115 features

Teal diamonds = source-defined candidates, not significance
6/115 highlighted; 0/115 passed global BH $q<0.05$
